

Model Lab Experiment

Q₁.

A college needs a simple student registration webpages. Create a form using HTML and CSS with fields and basic styling.

AIM:-

To design a simple Student Registration webpages using HTML, CSS with basic form fields and styling.

ALGORITHM:-

START

Create an HTML file

Add basic HTML structure (<html>, <head>, <body>)

Add a heading for the registration form

Create a <form> element

Add input fields:-

Name

Email

Phone Number

Gender (radio button)

Course (dropdown)

Address (text area)

Add a submit button

Use CSS to style:-

Background

Form layout

input fields and button

Save and open the file in a browser
Stop

CODE :

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<title> Student Registration form </title>
```

```
<style>
```

```
body {
```

```
font-family : Arial, sans-serif;
```

```
background-color : ■ sky blue;
```

```
}
```

```
• Container {
```

```
width : 400px;
```

```
margin : 50px auto;
```

```
background : ■ Dark Blue;
```

```
padding : 20px;
```

```
border-radius : 10px;
```

```
box-shadow : 0 0 10px gray;
```

```
}
```

```
h2 {
```

```
text-align : centre;
```

```
}
```

```
input, select, textarea {
```

```
width : 100%;
```

```
padding : 8px;
```

```
margin : 8px 0;
```

```
border-radius : 5px;
```

```
border: 1px solid #ccc;
```

```
}
```

```
.gender {
```

```
width: auto;
```

```
}
```

```
button {
```

```
width: 100%;
```

```
padding: 10px;
```

```
background-color: blue;
```

```
color: white;
```

```
border: none;
```

```
border-radius: 5px;
```

```
}
```

```
button: hover {
```

```
background-color: darkblue;
```

```
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<div class="container">
```

```
<h2> Student registration </h2>
```

```
<form>
```

```
<label> Name: </label>
```

```
<input type="text" placeholder="Enter your name  
required">
```

```
<label> Email: </label>
```

```
<input type="email" placeholder="Enter your email  
required">
```

```
<label> Gender:</label><br>
<input type="radio" name="gender" class="gender"> male
<input type="radio" name="gender" class="gender"> female
<br><br>
<label> Phone Number:</label><br>
<input type="tel" placeholder="Enter phone number">

<label> Course:</label>
<select>
  <option> BCA </option>
  <option> BSc </option>
  <option> BECE </option>
</select>
<label> address:</label>
<textarea row="3"></textarea>

<button type="submit"> Register</button>

</form>
</div>
</body>
</html>
```

SAMPLE OUTPUT

STUDENT REGISTRATION

NAME :

EMAIL :

GENDER :

☐ MALE

☐ FEMALE

PHONE NUMBER :

COURSE :

☒ BCA☐ BSC☐ BECSE

ADDRESS :

REGISTER

RESULT :

The student registration webpages was successfully created using HTML and CSS. The form collects user details and display them in a well structured and styled format

Q₂ Write a shell script to create a directory and list all files in it

AIM:-

To write a shell script to create a directory and list all files in it.

ALGORITHM:-

Start

Accept directory name from the user

Create the directory using mkdir

Move into the directory using cd

List all files using ls

Display the output

Stop

Code:-

```
echo "Enter directory name :"
```

```
read dirname
```

```
# create directory
```

```
mkdir $dirname
```

```
# move into directory
```

```
cd $dirname
```

```
echo "Files in the directory are:"
```

```
ls
```

SAMPLE OUTPUT:-

Enter directory name:

myfolder

Files in the directory are:

Result:

The Shell script was executed successfully. A directory was created and all files inside it were listed.
